

ABSTRACT

The motive of home appliances sale management system is to provide latest product to customers at the best market price and provide one stop shop for consumer durable needs. This is an era of computerization and data security. To combat with increasing trade and sales between customers and middlemen. This is application that provides managing the data and various other information and current status in the home appliances showroom. The project is intended to provide computerized information system support for the work of salesmen and owner. This system registers the employee details, product sold and available customer details and keeps record on their changes. This helps manager to have an overview on the progress of product sale and keep track on employee work. A bright feature of this is the inclusion of time scheduling features, which makes it more user friendly, more efficient and provide it high flexibility.
